

Paper Title: A Novel Method for Image Classification

Authors: John Doe, Jane Smith

Abstract: This paper proposes a novel Vision Transformer method. We use patch embedding and multi-head self-attention mechanisms. The model achieves state-of-the-art results on ImageNet.

Method: ViT splits images into 16x16 patches.

Training uses AdamW optimizer with learning rate $3e-4$.

Datasets: ImageNet, CIFAR-10, CIFAR-100.

Metrics: Top-1 Accuracy, Top-5 Accuracy, F1 Score.
